## **STUDY OBJECTIVES**

To meet the data reporting requirements and compliance with federal regulation Title VI, the City & County of Honolulu's Department of Transportation Services (DTS), Public Transit Division (PTD), completed a study of all riders of TheBus. The objectives of the study were to determine the passengers of TheBus:

1. Determine rider demographics
2. Self-identify as belonging to ethnic/racial minority groups
3. Understand rider travel patterns
4. Find out fare media usage for overall riders and low-income riders
5. Report total household incomes that are below federal poverty guidelines for their household size

## **METHOD**

### **SURVEY INSTRUMENT**

The survey instrument was developed by SMS in collaboration with representatives from the DTS and the O'ahu Transit Services (OTS), a City & County entity that manages TheBus' operations. The survey instrument was developed to only ask questions that were directly pertinent to the objectives of the study.

The fielded version of the survey instrument comprised of 18 questions elicited the following information from passengers:

1. Whether the respondent completed the survey on prior occasion (data from repeat respondents were excluded from analysis)
2. Whether the respondent is a visitor or resident to Hawai'i
3. The age of the respondent (only respondents over the age of 18 were surveyed)
4. Respondent's gender
5. Respondent's ethnic origin
6. Whether the respondent speaks a language other than English at home
7. Whether a respondent that speaks another language other than English, spoke English well to determine LEP
8. Respondent's employment status
9. Medium of fare payment for the ride on which the respondent was surveyed
10. How many trips was taken the day of survey
11. Number of days a week the respondent normally rides TheBus
12. Respondent's purpose of the trip
13. How respondent would get around if TheBus was not available
14. Whether respondent has a valid Drivers' License
15. Respondent's household size and total annual income which, in combination, provided data on whether the respondent lives above or below the federal poverty guideline for a given household size
16. Determine where the respondent started their trip
17. Determine where the respondent will finish their trip
18. Determine where the respondent lives

The survey instrument went through several rounds of review and modification until DTS was certain that all of the data points they needed were appropriately captured and SMS was satisfied that the method by which the questions were being asked would accurately produce the necessary data points.

Following DTS' approval of a final survey instrument, SMS had the survey translated from English into 10 additional languages: Chuukese, Hawaiian, Ilokano, Tagalog, Japanese, Korean, Marshallese, Traditional Chinese, Simplified Chinese, and Vietnamese (see Exhibit B). All 11 versions of the survey were formatted to fit on an 8.5-inch by 11-inch sheet of cardstock. Printing on heavier stock and using a two-sided format maximized readability and survey handling for passengers as they completed the survey while in transit on TheBus. SMS was responsible for printing all surveys.

## **FIELDING PROTOCOL**

The RFP put out by the DTS required that TheBus ridership study be surveyed to all 104 routes covered by the OTS. Each route needed to be covered one time and the statistical data of the sample shall achieve results with a 90 percent confidence level for the total system-wide ridership plus or minus 10 percent precision.

To achieve this SMS provided a schedule to the DTS prior to the beginning of the study to show what days each route would be covered until all 104 routes were covered at least once (see Exhibit A: Roster of Bus Routes). Surveys were conducted from November 13, 2018 until December 13, 2018.

## **SCANNING PROTOCOL**

All surveys were scanned in batches by route. Each survey was scanned immediately and 100 percent verification was done on all surveys to ensure data accuracy.

## **SAMPLE SIZE AND MARGIN OF ERROR**

A total of 1,200 surveys were collected. After removing those that had previously done a survey, we have a total of 1,071 useable surveys. The resulting population total used to compute the study margin of error was 1,091,612 trips. A sample size of 1,071 results in an over study margin of error of +/-2.99 percent at 95 percent confidence.
